

Duke Ujiro Onwamano

Software Developer / Architect

ujiroduke1@gmail.com | +234 904 079 1821 | Port Harcourt, Nigeria
github.com/DukeTheProgrammer | x.com/dukeethedev

Professional Summary

Full-stack software developer and architect with a passion for building elegant, performant applications across the entire technology stack. Experienced in designing scalable system architectures, developing responsive user interfaces with modern JavaScript frameworks, and implementing robust backend services. Adept at translating complex business requirements into clean, maintainable code while championing best practices in software design, testing, and DevOps.

Technical Skills

Frontend: React, TypeScript, JavaScript, HTML/CSS, Tailwind CSS
Backend: Node.js, Python, REST APIs, PostgreSQL, MongoDB
DevOps: Docker, Git, Linux, CI/CD, Cloud (AWS/GCP)
Architecture: System Design, Microservices, API Design, Design Patterns

Experience

Software Developer / Architect	Freelance / Self-Employed	2024 – Present
- Architected and built full-stack web applications from conception to deployment, delivering scalable solutions for diverse client requirements. - Designed and implemented RESTful APIs and database schemas, optimizing query performance and ensuring data integrity across PostgreSQL and MongoDB systems. - Developed responsive, accessible front-end interfaces using React and TypeScript, achieving measurable improvements in user engagement and page load performance. - Established CI/CD pipelines and containerized deployments with Docker, reducing release cycles and improving development workflow reliability.		

Education

B.S. in Computer Science	University of Port Harcourt (Uniport)	2024 – Present
Pursuing a comprehensive degree in Computer Science with focus on software engineering, data structures, algorithms, and distributed systems.		

Certifications & Achievements

- Active open-source contributor with a commitment to clean code, documentation, and community-driven development.
- Continuous learner, staying current with emerging technologies, frameworks, and architectural patterns through hands-on projects and research.
- Strong advocate for developer experience, tooling optimization, and automated workflows to maximize productivity and code quality.
